

# THE RESILIENT FLEXIBLE SILT FENCE Built to outlast and outperform

SiltShield:  
10  
MONTHS  
AND  
STILL  
WORKING

SiltShield:  
CURB APPEAL WITH DURABILITY

## Compare SiltShield to old fashioned silt fencing

Conventional silt fencing is ineffective and not environmentally friendly

SiltShield filters stormwater as it flows through drainage holes

Conventional stakes and fabric are not durable

Storm water runoff from developed areas can carry chemicals, oils, and eroded soils, polluting our waterways and, potentially, our drinking water.
